

# Antonello software installation

1. Fiji imageJ runs based on JAVA. In case you do not have JAVA, install "jre-8u311-windows-x64" or download and install a latest version of the Java SE Runtime Environment:  
<https://www.oracle.com/java/technologies/javase-jre8-downloads.html>

2. Unzip "fiji-win64.zip". This folder contains the Fiji ImageJ software. You can also download it from: <https://imagej.net/software/fiji/downloads>

Paste the folder into C:/ The software does not need installation. Inside the main folder "Fiji.app", double-click "ImageJ-win64.exe". The application starts. It asks to update the software. Updates are not necessary. Quit it and proceed to next steps.

3. Copy Antonello-calib.ijm and Antonello-split.ijm in:  
Fiji.app/ plugins / script / file

4. Copy the "dcraw" folder in:  
Fiji.app/ plugins

5. Copy the "ij-dcraw\_.jar" in:  
Fiji.app/ plugins
